Hundredfold Select Alternative Fund

An adaptive, alternative fixed income fund with the ability to use managed futures and alternative investment products, such as gold and oil, to seek non-correlated low volatility returns.

High Yield Bond Exposure

The Fund's manager has had over 30+ years of experience investing in high yield bonds. Actively managed high-yield exposure may create foundational stability in a portfolio.

Alternative Opportunities

Alternative strategies and alternative investment choices are inherent in this fund. Alternative strategies may include oil and gold strategies. Alternative investment exposure may be made up of securities acting inversely to high yield bonds and equity sectors.

Limited Equity Exposure

The Fund's philosophy centers on the importance of risk management. Equity exposure is important for capturing growth, however, exposure is limited and variable in the overall investment of this fund.

Growth of a \$10,000 Investment

The Fund has returned an average of 6.15% annually since inception through 3/31/2025*

© 2025 Morningstar, Inc. All Rights Reserved. The information contained herein: (1) is proprietary to Morningstar; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Ratings does not include any adjustments for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. No compensation was given for ratings.

Consider these risks before investing: Aggressive investing techniques, asset-backed securities risk, credit risk, counterparty risk, depositary receipt risk, derivatives risk, emerging markets risk, equity securities risk, foreign securities risk, high portfolio turnover risk, high-yield securities risk, holding cash risk, interest rate risk, leverage risk, master limited partnership risk, non-diversification risk, other investment companies risk and ETFs risk, prepayment risk and mortgage-backed securities risk, shorting securities risk, small and mid-capitalization risk, subadvisor investment strategy risk, tax risk, and floating rate notes risk. There is no guarantee the fund will achieve its investment objective. You can lose money by investing in the Fund. Please carefully review the prospectus for detailed information about these risks.

S&P 500 TR Index is a capitalization weighted index of 500 stocks representing all major domestic industry groups. It is not possible to directly invest in the Index. The S&P 500 TR assumes the reinvestment of dividends and capital gains.

Bloomberg U.S. AGG. Bond TR Index: measures the underlying performance of the total U.S. investment grade bond market. It is a market value-weighted index that tracks the daily price, coupon, pay-downs, and total return performance of fixed-rate, publicly placed, dollar-denominated, and non-convertible investment grade debt issues with at least \$250 million par amount outstanding and with at least one year to final maturity.

Fund Statistics based on SFHYX (Service Class share) and the S&P 500

Standard Deviation	7.96
Sharpe	0.62
Beta	0.32
R-Squared	0.47
Up Market Capture	35.69%
Down Market Capture	28.98%
Expense Ratios	
SFHYX	2.64%
HFSAX	1.73%

Portfolio statistics are based on 5-year calculations from Morningstar, FastTrack Data, and Bloomberg.

Standard Deviation: is also known as historical volatility and is used by investors as a gauge for the amount of expected volatility. It is a measure of the dispersion of a set of data from its mean. **Sharpe Ratio:** a risk-adjusted measure calculated by dividing a fund's annualized excess returns over the risk-free rate by its annualized standard deviation. The higher the Sharpe ratio, the better the fund's historical risk-adjusted performance. **Beta:** a statistic that measures volatility of the fund, as compared to that of the overall market. The market's beta is set at 1; a higher beta than 1 is considered to be more volatile than the market, while a beta lower than 1 is considered to be less volatile. **R-Squared:** a measurement of how closely a fund's performance correlates with an index. It can range between 0 and 1. An r-squared of 1 indicates perfect correlation, while 0 indicates no correlation. **Up Market Capture:** a statistical measure of an investment manager's overall performance in up markets. The up market capture ratio is used to evaluate how well an investment manager performed relative to an index during periods when that index rose. **Down Market Capture:** a statistical measure of an investment manager's overall performance in down markets. The down market capture ratio is used to evaluate how well or poorly an investment manager performed relative to an index during periods when that index has dropped.
